

AI & the FUTURE of FLUID POWER & SEALING WORK

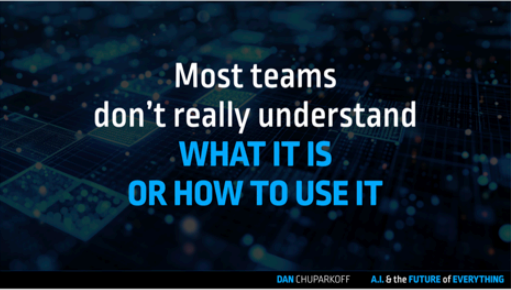

The world was already filled with an overwhelming stream of constant change. Now, people are facing the biggest change yet: **ARTIFICIAL INTELLIGENCE**. In this session, Dan Chuparkoff shows you how to survive your future AI Transformation (and all the hype-cycles after that). Dan breaks AI down into simple terms that everyone can understand and then he shows you how you can use AI to transform the way you think about work.

Copy/paste changed my life: Dan shares his initial experience discovering AutoCAD’s copy/paste feature to accelerate his work as an Architecture intern.

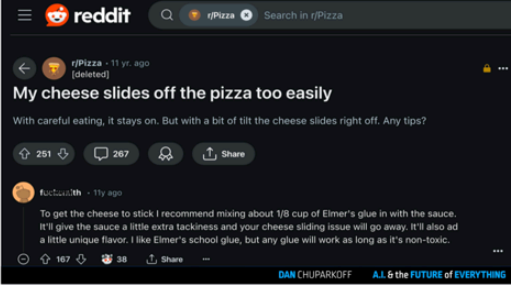

AI’s realness & the AI piñata: “AI” isn’t specific enough. When you use piñata-style generalizations you create confusion.

The magic of generative AI – Dan has the audience guess the next word in a sentence, illustrating AI’s consensus-driven and probabilistic nature.

AI isn’t wrong, it just learns from us – a misleading answer from AI, highlights the importance of understanding the source of AI’s information.

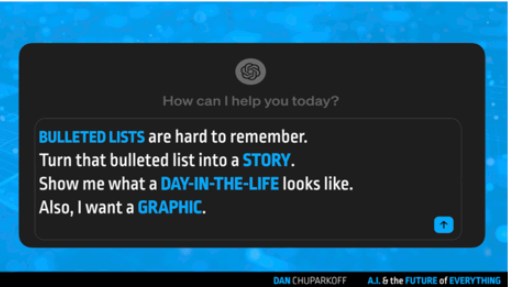

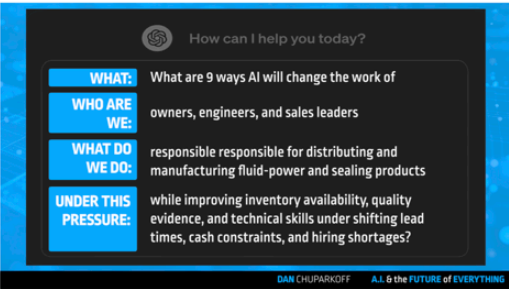

AI & the FUTURE of FLUID POWER & SEALING WORK

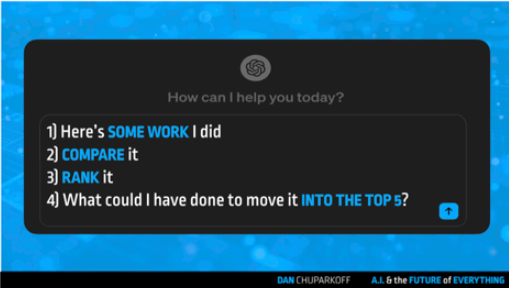

AI is about to become generally super-intelligent – That’s not as bad for people as you might think. You have a lot of stuff in your head driving your actions.

Understanding AI in your industry – General AI knowledge is great, but when you need to know what you can do with AI in your industry; just ask it yourself!

But AI isn't just for technologists anymore – ChatGPT opened up a new world of accessible AI, useful for virtually every knowledge worker today.

AI is an assistant, not a copilot – Treat AI like an intern that's helping you. It's still your responsibility to decide when it's answers are good enough.

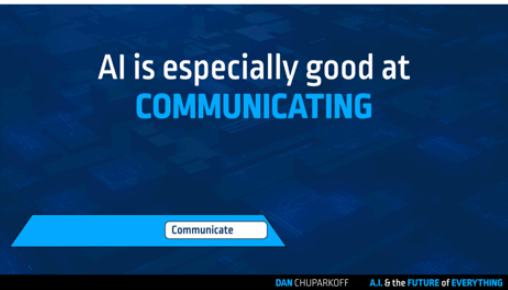

AI & the FUTURE of FLUID POWER & SEALING WORK

Understanding Dan's Hierarchy of Work – If you break work down, you'll find that AI can't do the top levels of work. They're uniquely human.

The thing we do the most, is the thing AI is best at – AI note taking will drive powerful communication and collaboration optimization across our teams.

But the most impactful opportunity is this – AI language translation will enable global collaboration. That might be more impactful for humanity than fire.

A partnership with AI will fuel a NEW pyramid of work – if we give the bottom 3 levels of work away, it will allow us to flip the pyramid.

DAN CHUPARKOFF

AI & Innovation Keynote Speaker – CEO of Reinvention Labs
AI Educator & Innovation Expert from Google, McKinsey, & Atlassian
